

17-21 JUNE 2019
EU SUSTAINABLE ENERGY WEEK
SHAPING EUROPE'S ENERGY FUTURE

#EUSEW19

POLICY CONFERENCE

Market Surveillance: More Capacity and Clarity - More Impact

Date: 20 June 2019

Venue: Residence Palace, Rue de la Loi 155, B-1040 Brussels

Main Contact Point: PROSAFE

Avenue des Arts / Kunstlaan 41 - 1040 Brussels - Belgium

T +32 2 80 80 996 - M +32 471 21 67 79 - E info@prosafe.org

Presented by

This programme arises from the Actions EEPLIANT2 (GA No. 752591), INTAS (GA No. 695943) and ANTICCS (GA No. 785122), which receive funding from the European Union's Horizon2020 research and innovation programme. The content of this document represents the views of the

authors and it is their sole responsibility; it can in no way be taken to reflect the views of the Executive Agency for Small and Medium Enterprises (EASME) or any other body of the European Union. EASME does not accept responsibility for any use that may be made of the information it contains.

EUSEW2019 Policy Conference

Introduction

Over the last few years, Market Surveillance Authorities (MSAs) and civil society across Europe have increasingly joined efforts to generate energy savings by preventing losses resulting from non-compliant products. Their work raises confidence among purchasers, manufacturers, and retailers, whilst improving the enforcement and impact of EU energy efficiency legislation. Throughout the seminar, lead experts from MSAs, the European Commission, the European Parliament, and from civil society will share best practices and discuss policy challenges based on the work undertaken in several EU-funded projects. They will address the new legislative proposals related to energy efficiency and ecodesign, and take stock of the current state of the market. Furthermore, the speakers will describe the actions that have been taken to mobilise and to build market surveillance capacity in the Member States which is delivering a more compliant and energy efficient European Union market.

Programme

Speakers

PROSAFE

Ioana Sandu
Executive Director

EUROPEAN COMMISSION

Stamatīs Sivitos
Project Advisor, EASME

Ronald Piers de Raveschoot,
Policy Officer, DG ENER

MARKET SURVEILLANCE

Tim Stokes
Programme Manager, SEAI Ireland

Bram Soenen,
Senior attaché Product policy, FPS
Health, Belgium

Nerea Ruiz,
Programme Manager

AGENDA ITEMS	TIMING	SPEAKERS	TOPICS
1.	14.00 - 14.05	Ioana Sandu, Chairperson	PROSAFE: Welcome and introduction
2.	14.05 - 14.15	Stamatis Sivitos	An overview of H2020 projects related to the implementation of EU product efficiency legislation

Measuring the Power of Market Surveillance Actions on Energy Efficiency

3.	14.15 - 14.25	Ronald Piers de Raveschoot	The importance of measuring impacts in EU-funded Market Surveillance Actions on energy efficiency
4.	14.25 - 14.40	Tim Stokes	Measuring the unmeasurable? A practitioner's perspective on the challenge of assessing the impact of market surveillance: The EEPLIANT Joint Actions trilogy
5.	14.40 - 14.50	Interactive Q&A Session and collecting best practices and ideas from the audience	

New Applications in Market Surveillance on Energy Efficiency and Ecodesign

6.	14.50 - 15.05	Bram Soenen	The next challenge for Market surveillance authorities: Delimitation between "pure" noncompliance and artfulness circumvention - ANTICSS project
7.	15.05 - 15.20	Nerea Ruiz	What specific aspects relate to market surveillance of industrial products? Results and findings for industrial fans and transformers - INTAS project
8.	15.20 - 15.30	Interactive Q&A Session and collecting best practices and ideas from the audience

Market Surveillance: More Capacity and Clarity - More Impact

PROSAFE H2020 Projects

EEPLIANT2014, EEPLIANT2016, and MSTyr15 Joint Actions help deliver the intended economic and environment benefits of the EU Energy Labelling and Ecodesign Directives by increasing the rates of compliance with the energy efficiency requirements.

The three EU-funded projects, have built a pan-European community to support EU's energy efficiency goals. 28 Market Surveillance Authorities have been cooperating to coordinate their monitoring, verification, and enforcement actions and achieve transnational impacts across the EU Single Market.

The three project consortia carried out coordinated market surveillance and tested energy performance across different product sectors: LED lamps, heaters, printers, household and professional refrigerating appliances, network standby products, and tyres. The EEPLIANT programme is set to continue with an EEPLIANT3 project starting in June 2019 with authorities from 20 EU Member States and Turkey.

INTAS

With the INTAS - Industrial and tertiary product Testing and Application of Standards project, ECOS was working with 11 national market surveillance activities and partners to support market surveillance of Ecodesign requirements for large industrial products. These products raise new challenges due to their complexity and size.

ANTICSS

In April 2018, the ANTI-CIRCUMVENTION OF STANDARDS (ANTICSS) - Anti-Circumvention of Standards for better market Surveillance project started with the goal to assess if and how Ecodesign and Energy labelling legislations and harmonised standards can be circumvented in order to achieve a better product performance.

The projects are funded by the European Union

Background information

PROSAFE is a non-profit professional organisation for market surveillance authorities and officers from throughout the European Economic Area (EEA). Founded in 1991, its primary objective is to improve the safety of users of products and services in Europe. Since 2006, PROSAFE has taken the initiative to coordinate more than 20 EU funded Joint Actions between market surveillance organisations within the EEA.

Founded in 2001, **ECOS** is the only organisation worldwide working to defend the environmental interests in standardisation. Its goal is to contribute to the development of ambitious strategies to reduce environmental impacts, promote resource and energy efficiency, and ensure a healthy environment. ECOS co-leads the "Coolproducts for a cool planet" campaign which aims to ensure that ecodesign and energy labelling truly work for Europeans and the environment.

Relevance

Building on the 2020 Climate and Energy Package, the 2030 Climate & Energy Framework sets a target of at least 32.5% improvement in energy efficiency. Achieving this ambitious goal requires, amongst other things, an effective market surveillance system.

Impacts

The impact of the 28 Ecodesign Regulations and 16 Energy Labels is tremendous: according to the European Commission, 9% of the current total EU energy consumption will be saved yearly from 2020 onwards thanks to the current rules. This is nearly half of the energy savings target set by the EU for 2020. But as for every European policy, verification of compliance are major conditions for the success of the Ecodesign and Energy Labelling policies. The projects help the Member States authorities to cooperate with key stakeholders e.g. industry associations, civil society, policy makers, standards developers, etc., in achieving higher level of awareness and higher rates of overall product compliance with the EU legislation requirements.

Challenges

Part of the energy efficiency challenge is that some products sold on the market consume more energy than allowed by the legislation and declared by the manufacturers. This session will highlight how a series of pan-European market surveillance projects implement change on the ground to help shape the future of EU's market surveillance on energy efficiency. Defeat devices, circumvention, testing of products, metrics to enable better and more comprehensive assessment of impacts and energy savings are all key topics on our agenda. Lead experts from MSAs, the European Commission, and civil society will share best practices and discuss policy challenges based on the practical work undertaken in the above projects. The audience will be able to interact with the panel by giving their opinion during Q&A sessions.
